

AUTOMOTIVE

Lubricant Range

Rock Oil has vast automotive experience with a long history of motorsport involvement, including supporting factory teams at Le Mans. This involvement at the very highest level ensures that we are at the forefront of lubricant technology. With today's modern automotive requirements such as high specific horsepower output, combined with the need for reduced emission levels and extended drain intervals; lubricants have to work harder than ever to ensure optimum performance and reliability.

Each Rock Oil automotive lubricant has a specific set of approvals which meet various OEM (original equipment manufacturer) recommendations. Selecting the correct lubricant based on engine approval requirements will optimise vehicle efficiency whilst satisfying emission and economy requirements.
